EDUCATION

Vellore Institute Of Technology, Vellore

Bachelor of Technology in Computer Science and Engineering (Core Branch)

Vellore, TN

April 2021 – July 2025

EXPERIENCE

Backend DevOps Intern

September 2023 - November 2023

Kelly Technologies

On-Site / Hands-On

- * In-depth understanding of AWS cloud computing services, including EC2, S3, RDS, Lambda, IAM, VPC, and more.
- * Developed virtual environments using Docker and Ubuntu to facilitate service testing for colleagues.
- * Utilized Terraform to set up on-demand development clusters in AWS, enabling engineers to test integrations efficiently
- * Created various automation scripts, including YouTube tracking and a screen recording tool using Selenium Chromedriver

PROJECTS

Developed YouTube Analytics Tracking Script | *Python, Flask, PostgreSQL, Docker*

Script that integrated with Apache to monitor and update YouTube analytics data hourly.

- Designed and implemented a robust script for real-time tracking of YouTube metrics.
- Ensured seamless integration with Apache to handle data requests and updates.
- Analyzed and reported key performance indicators to assist in data-driven decision-making.
- Technology Used: Python with integration of Apache Airflow, YouTube Data API.

Developed Event Recording and Monitoring | *Python, Flask, PostgreSQL, Docker, Strapi, Selenium*

Script designed to detect and extract videos and take screenshots as per API calls in real-time.

- Integrated screen recording and screenshot functionality to capture visual data at precise moments
- Automated the process to ensure accurate and timely data collection.
- Python script that integrated with STRAPI to fetch events from a URL, record the screen, and capture screenshots at specified times.

Vehicle Number Plate License Detection System | *Python, OpenCV*

System designed to detect and extract license plate information in real-time.

- Developed a Python-based application to detect vehicle number plates using OpenCV.
- Utilized for identifying license plates in live video streams.
- Implemented real-time image processing to extract license plate data and save ROI (Region of Interest).
- Designed an interactive system to display key extracted information, including state, name, gender, and registration date.
- Ensured high accuracy by optimizing detection parameters and integrating with a dynamic input pipeline.
- Technology Used: Python, OpenCV, Haar Cascade, and real-time video processing with CV2.

Technical Skills and Interests

Languages: Java, Python, Javascript(basics), HTML+CSS

Tools: Nodejs, VScode, Git, Github, Docker, Terraform, Bitbucket

Frameworks: ReactJs

Cloud/Databases: Relational Database(mysql), AWS

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Object Oriented Programming, Database Management System, Software Engineering.

Areas of Interest: Development, Cloud Security, Gaming.

Soft Skills: Problem Solving, Communication, Self-learning, Presentation, Adaptability
